

The perfect addition to any sand stall

What is Pack Mat?

- Pack Mat is a multi-celled mattress filled with rubber crumb from recycled tires.
- Pack Mat is protected by a durable top cover and two inches of sand or other pack bedding material.

What are its benefits to the cow?

- Pack Mat provides a soft bed – sand will not compact.
- The stall is stabilized to prevent 'head down' cow positioning.
- Pack Mat ensures excellent traction and sure footing.
- Pack Mat provides the 'hock friendliness' of sand.
- Fresh cows drain better.

How does Pack Mat benefit the dairy producer?

- Pack Mat reduces sand usage by 50% to 80% while providing excellent comfort.
- With Pack Mat there's less sand-laden manure, therefore less sand in pumps and lagoons (sand will not compact in cold weather).
- Other 'pack' materials such as straw or shavings may be used as an alternative to sand.

Why Promat?

- Promat Ltd. is proud to be an active participant in the research and development of animal comfort products with good ergonomics and sound economics. We are always pleased to provide the research data to our customers.
