

The 'golden standard' in cow comfort

What is Pasture Mat?

- Pasture Mat is a multi-celled mattress filled with uniformly-sized rubber crumb.
- It won't tear, stretch, deform or lose its shape.
- The top cover is durable, wear-resistant and non-abrasive.
- Pasture Mat is non-organic and does not support production of bacteria.

What are its benefits to the cow?

- Pasture Mat feels and behaves like natural pasture – providing a firm footing for cows without pillowing inward.
- Pasture Mat absorbs the shock of repeated impacts and eliminates risk of injury to even the heaviest cow.
- It provides an ideal surface for bedding materials such as chopped straw, wood shavings or sawdust.

How does Pasture Mat benefit the dairy producer?

Reduced Costs

- Installs over existing concrete base.
- Less bedding materials required – comfort is taken care of by the Pasture Mat.
- Reduced labor costs to maintain and clean stalls.

Herd Management

- A stress-free environment is a goal of herd management. Pasture Mat provides benefits that impact directly and positively on herd health, productivity and management costs.

Why Promat?

- Promat Ltd is 'the leader in animal comfort' because of its diligence in research and testing. Our patented system is comfortably supporting over 1,000,000 dairy cows. Knowledgeable cow comfort sales representatives are always available to assist.
